MDF ColourPanel Plymasters

ColourPanel is a unique product to Plymasters, designed to address the limitations of standard MDF by featuring colour through the full thickness. This makes it suitable for applications such as acoustic panels, routed designs, and projects where exposed edges are part of the design, removing the need for edge tape.

Manufactured using low-emission, eco-conscious materials, ColourPanel is intended for interior use in areas such as kitchens, bathrooms, play spaces, furniture, and commercial fit-outs.

Fire-retardant variant available in 19mm black.

Possible Techniques

For outstanding ColourPanel Designs

CNC routing

The high density and colour throughout makes these panels a reliable, unique option for routing.

Acoustic Solutions

Ideal for perforation for sound absorption solutions. The panel can be bonded to an acoustic felt for increased sound absorption performance. Micro perforation is also possible on ColourPanel MDF.

Laminating

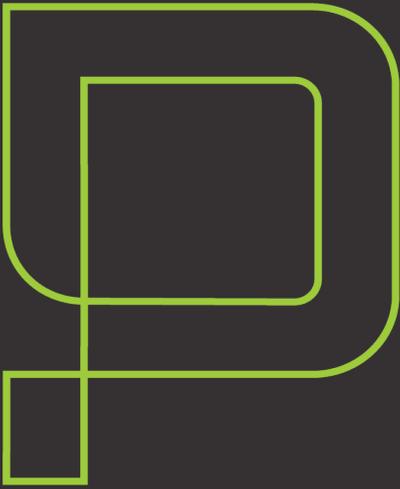

ColourPanel MDF can be laminated or veneered to create visually engaging routed designs. Recommended sanding the surface before gluing process.

Furniture

High Density and sturdy, ColourPanel MDF is a great choice for colourful, exposed edge furniture.
